BASELINE SECURITY SOLUTIONS LLC

Baseline Rewind

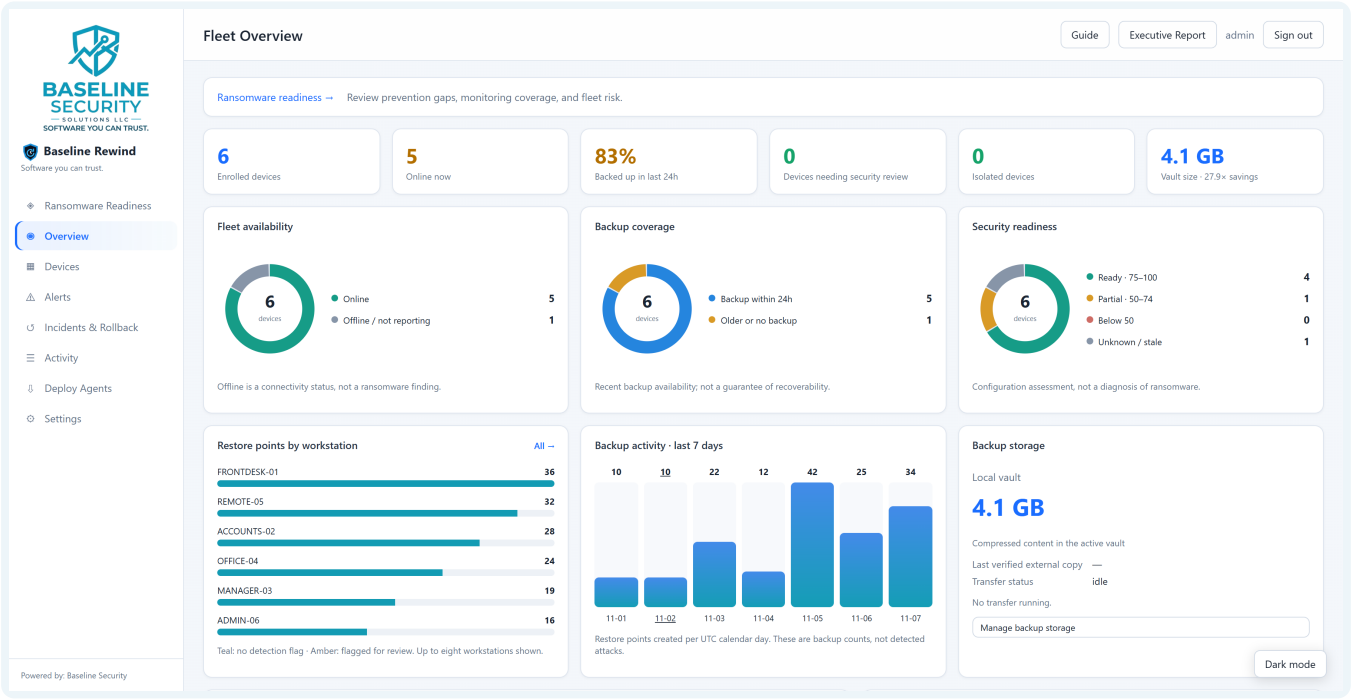

Software you can trust.

SMALL & MIDSIZE BUSINESSES

Keep a bad day from becoming lost work.

Ransomware readiness, containment, and file recovery in one dashboard.

When ransomware locks proposals, invoices, drawings, or shared documents, a small team can lose access to the files that keep work moving. Baseline Rewind gives your IT provider a practical recovery workflow for protected Windows data.

Actual light-mode Overview. All workstation data and metrics are fictional, not performance benchmarks.

WHAT YOUR IT TEAM CAN DO

Know where to improve. Readiness scores show security gaps, unavailable monitoring, and devices needing a fresh assessment.

Act on suspicious activity. Canaries, mass-encryption signals, and Windows event evidence support investigation. Critical policy can isolate and pause backups.

Recover the files that matter. Protect selected Windows files with a central vault that endpoint agents cannot overwrite or delete; restore from a chosen point with SHA-256 verification. Restore one folder, one workstation, or an affected fleet.

Keep management informed. A familiar dashboard, executive reports, technical detail, and operation history make recovery status easier to review.

COMPLIANCE & CONTINUITY

Your obligations depend on your sector, state laws, contracts, and data. If your business is covered by the FTC Safeguards Rule, its information-security program includes applicable response and recovery requirements; Rewind supports selected technical tasks, not the whole rule. CISA separately recommends tested backups as ransomware preparation. [1,2]

NEXT STEP

Ask for a recovery-readiness review. Choose critical folders, set recovery goals, and demonstrate a verified pilot restore.

Scope: Rewind restores protected files, not Windows or hosted applications, and does not remove malware or stop data theft. Protect the server, use HTTPS and storage encryption, and retain separate offline/immutable backups. Compliance depends on your complete program and applicable requirements. No recovery-time, loss-prevention, insurance-eligibility, or compliance outcome is guaranteed.
